## House Valve 101

Learning the location of your house valve and how it operates is important. The house valve controls water flow inside the home.

### Things to know about your house valve:

1. The house valve is normally located near the hose bib in the front yard.
2. Turn it on and off routinely to exercise the valve, helping to prevent corrosion and to ensure it is functioning properly.
3. Should you find the water in your home will not turn on, you should first check your house valve to make sure it is on.
4. It is the responsibility of the homeowner to operate and maintain the house valve, including repairing leaks, or replacement.
5. To shutoff water to **both your home and yard**, call our 24-hour emergency line at 510.668.6500 and a technician will be sent out to provide assistance.

Blue knob on the right is a gate valve. Turn it clockwise to shutoff water and counter clockwise to turn water on

Proud to provide a reliable supply of high quality water at a reasonable price to Fremont, Newark and Union City
